

Stability Data –5-ALA Formulation

Refrigerated

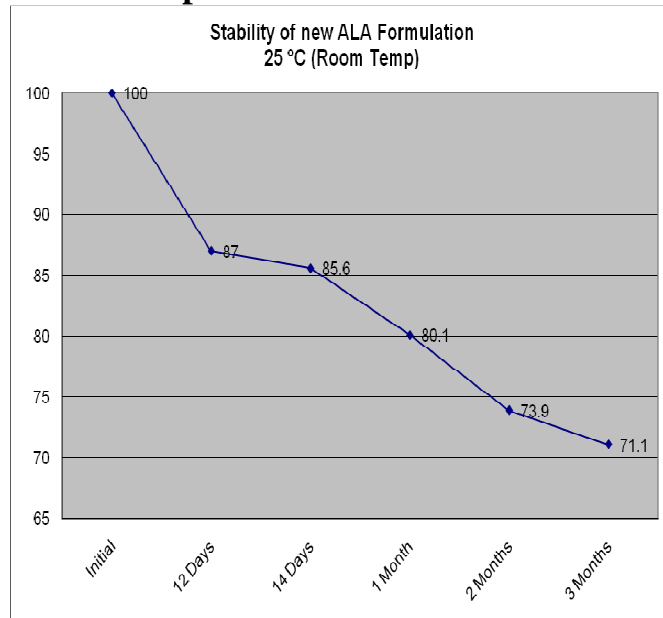

If kept in the fridge, the new ALA Formulation shows **remarkable stability**. After 2 weeks the formulation has a stability of 98.1% and after 12 weeks this is 94.9%*.

We recommend that if kept at these conditions the formula can safely be stored for 3 months.

*The pharmaceutical industry accepts $\pm 10\%$ in stability of active compounds

Room Temperature

At room temperature, 5-ALA will remain stable within the realm of acceptance for up to 10 days.*

If the formulation is being stored at room temperature, we recommend that the formula be kept for no longer than 10 days to ensure the maximum efficacy of the product.

*The pharmaceutical industry accepts $\pm 10\%$ in stability of active compounds

The new ALA formulation is exceptionally stable and is suitable for either room temperature or refrigeration storage. For an optimal lifespan, refrigeration is recommended. These outstanding results also show that it is now safe to transport the formulation at room temperature.
